Simple KPI Tracking Sheet

Project Overview

The Simple KPI Tracking Sheet is a beginner-friendly data analytics project created using Google Sheets. It helps track key business performance indicators (KPIs) using sales order data and spreadsheet formulas.

Objectives

- Track total revenue.
- Calculate total units sold.
- Calculate average order value.
- Identify the top-performing product by total revenue.
- Automate calculations using spreadsheet formulas.

Tools Used

• Google Sheets
• Microsoft Excel (for exported workbook format)

Dataset

The practice dataset includes Order ID, Date, Product, Category, Units Sold, Unit Price, and Revenue.

Key Performance Indicators (KPIs)

- **Total Revenue:** Sum of revenue across all orders.
- **Total Units Sold:** Total quantity of units sold.
- **Average Order Value:** Total revenue divided by the number of orders.
- **Top Product:** Product with the highest total revenue.

Formulas Used

```
Revenue: =ARRAYFORMULA(IF(C2:C="","",E2:E*F2:F))
Total Revenue: =SUM(G2:G)
Total Units Sold: =SUM(E2:E)
Average Order Value: =IFERROR(SUM(G2:G)/COUNTA(A2:A),0)
```

Skills Demonstrated

Data organization • Spreadsheet formulas • KPI tracking • Basic business analysis • Automated reporting

Conclusion

This project demonstrates how Google Sheets can be used to organize sales data, automate calculations, and summarize business performance through simple KPIs.
